

What is one way physicists define time?

A progression...

DIRECTIONS:

Using the code grid below. Find the words listed by matching the grid shape and colour with the letter in it. Write the letters below each shape to finish answering this phrase:

R	A	N	T	P	G
I	E	D	O	M	V
C	F	W	S	U	H

I'M SHAREABLE! 😊

What is Time?

Time is something that repeats itself, and keeps repeating itself in the same way over and over again. Think of the calendar. It is the same every year. There are always 12 months in a year and seven days in a week. For a clock, there are always 24 hours in a day.

It's like having dinner at 6:00 pm. Time puts events in our lives in order. Clocks and calendars tell us where we are in the life of the world or the universe.
